

the primary frame] and each extension including a rear end having a first flange extended downward, each flange, itself not being a magnet, including a magnetic material, the primary frame comprising:

a second bridge; and

two sides, each having a stud, each stud including a magnetic material;

wherein when the primary frame is supporting the auxiliary frame,

each magnetic material of the primary frame magnetically engages in a lateral manner with one of the magnetic materials of the auxiliary frame for securing said auxiliary frame to said primary frame;

each stud is extended over by one of the extensions, and can support that extension to prevent the auxiliary frame from moving downward relative to the primary frame; and

the flanges are located behind the studs to further secure the auxiliary frame to the primary frame, and to reduce the likelihood of the auxiliary frame from being disengaged from the primary frame if the auxiliary frame is being pulled forward relative to the primary frame.

13

15. (Once Amended)

A primary frame adapted to support an auxiliary frame, which includes a first bridge having an arm [extended rearward toward the primary frame], the arm including a rear end having a flange extended downward, the flange, itself not being a magnet, including a magnetic material, the primary frame comprising:

a second bridge, which includes a magnetic material;

wherein when the primary frame is supporting the auxiliary frame,
